

Key Investor Information

This document provides you with key investor information about this fund. It is not marketing material. The information is required by law to help you understand the nature and the risks of investing in this fund. You are advised to read it so you can make an informed decision about whether to invest.

Robeco QI Global Multi-Factor Credits IH EUR (LU1235145213)

This fund is a subfund of Robeco Capital Growth Funds, SICAV

Management Company: Robeco Luxembourg S.A.

Objectives and investment policy

Robeco QI Global Multi-Factor Credits invests systematically in predominantly investment grade credits. The selection of these bonds is based on a quantitative model. The fund offers balanced exposure to a number of quantitative factors by focusing on bonds with a low level of expected risk (Low Risk factor), an attractive valuation (Value), a strong performance trend (Momentum) and a small market value of debt (Size). The investment universe includes bonds with at least a BB- rating.

To preserve the value of the investments of Robeco Global Multi-Factor Credits IH EUR in Euro against the fluctuations of other currency positions in the portfolio, derivatives are used for currency hedging transactions.

Benchmark: Bloomberg Barclays Global Aggregate - Corporates (hedged into EUR)

The fund aims to outperform by taking positions that deviate from the benchmark.

This share class of the fund does not distribute dividend.

You can purchase or sell units in the fund on any valuation day. This fund may not be appropriate for investors who plan to withdraw their money within 5 years.

Risk and reward profile

Historical data, such as is used in calculating the synthetic indicator, is not a reliable indication of the future risk profile. The risk and reward category shown is not guaranteed to remain unchanged, the categorization may shift over time. The lowest category does not mean a risk-free investment.

Bond funds in general are less volatile than equity funds. This fund has a higher volatility compared to other fixed income funds, as it may have exposure to high yield bonds. High yield bonds have an elevated chance of default making these bonds, within the fixed income range, the more volatile products.

The following data are deemed material for this fund, and are not (adequately) reflected by the indicator:

- The product uses foreign exchange derivatives for currency risk hedging. A derivative counterparty of the product may fail to fulfill its obligations. This counterparty risk is reduced by using collateral.
- The product invests in debt securities. Issuers of debt securities may default on their obligations.
- The investment exposure of the product is obtained to a material degree through derivatives. A derivative counterparty of the product may fail to fulfill its obligations. This counterparty risk is reduced by using collateral.
- Derivative instruments may present a leverage effect, which will increase the sensitivity of the product to market fluctuations. The risk is limited within the conditions of the products integral risk management.
